Seed on Approval

All our seeds are shipped subject to your own test and approval, or test by any State Experiment Station and if not found first class it may be returned to us and the money will be refunded. We do not guarantee the crop, we can't do that, but we allow you to be absolutely your own judge as to the purity and quality of the seed.

CONDON BROS., SEEDSMEN, Rock River Valley Seed Farm, ROCKFORD, ILLINOIS

GOOD SEED CORN

Is Extremely Scarce This Year

All over the entire corn belt, as far south as Texas, west to the Rocky Mountains, east to the coast, and north to the Canadian border, this year's corn crop, while apparently a bumper yield, was so backward and late that the cold rains, snow and hard freezing weather of October makes it absolutely worthless for seed unless picked prior to frost, and even then with fairly matured ears that were picked prior to frost, and properly dried, there is a large percentage that will never grow; consequently there was a vast expense entailed this year in saving any good seed, for in order to get one bushel we were forced to pick and dry four and five; therefore, we tell you this will be a Serious Calamity unless farmers get busy at once and secure their seed before it is too late.

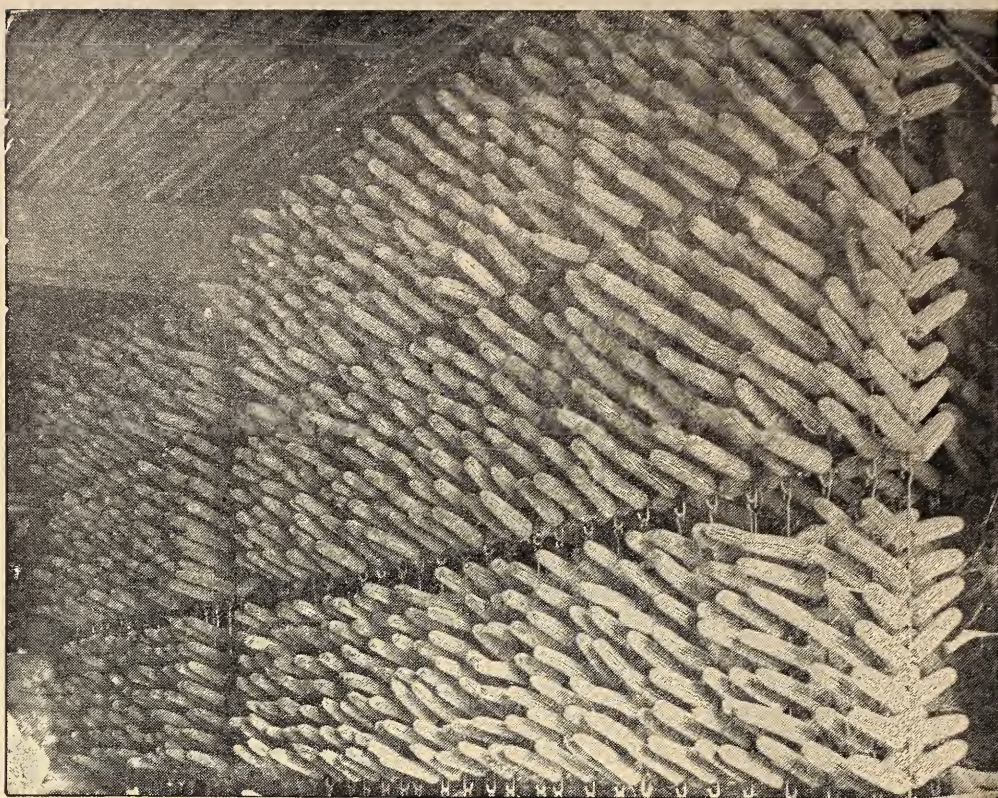

Positively I question if there is enough good seed corn to go around.

Don't gamble with your Corn Crop. It is the Biggest Money Maker

of all, and you must have good seed if you want to harvest good hard corn for your hogs

work and a bunch of money we feel more than gratified to have on hand at this time a reasonably good quantity of Extra Fancy Seed Corn to supply to our many customers who look to us for their annual planting stock.

All our Seed Corn is Northern Grown (excepting the ensilage) hand tipped and butted, thoroughly graded, first class quality, just the same care and attention given the seed we sell you as the seed we plant on our own farms, and the prices are based on cost plus only a reasonable profit and sold you under the following

This is how we air dry our Seed Corn. Call and see for yourself.

Our entire crew worked day and night sorting and drying Corn in order to secure our usual requirements and while it cost us a lot of hard

GUARANTEE

We grant you 10 days after arrival of your Seed Corn to critically test and examine it. If not up to your liking, ship it back at our expense and you will get your money refunded by return mail. No wrangling here. You are the judge. You don't take any chance buying of us. Order early please.

Yours truly, CONDON BROS., SEEDSMEN.

Equal to Oil Meal in feeding values, lb. for lb.

Soy Beans on every farm will make more money than any other crop.

Plant them in all your Corn at the rate of one bushel for ten acres. Get a bean attachment for your corn planter and grow two crops instead of one. If you use your Corn for Silo, the Soy will furnish a balance ration, equal to Cotton Seed Meal. The Ito San is the best variety according to our experiments. Yields abundant foliage and is completely loaded with long fat pods well filled as shown in the picture. This variety will fully mature fifty miles north of here. Those who do not have Silos can use these to good advantage by planting as stated above, husk your Corn and then turn the hogs in to clean up. They will get every Soy Bean and vine and every ear of stray Corn, and the combination feed is great for them. The great feeding value of Soy Beans is not all. They are different from most crops and add to fertility of soil rather than take from it. It's a positive fact by actual test Corn does fully as well or better with Soys planted in it than when planted alone. That's a broad statement and our good friend, Mr. Breckenridge, hardly believed it until he tried them last summer; and when our good County Agent, Mr. Keltner, was out there with us in late August he and many others acknowledged the fact. By all means try them this season either for Silage, Hogging down or drill in for a hay crop. If you drill alone for hay put rows 36 inches apart and seed 1 inch apart in the row, using 60 lbs. per acre. If you drill in with your Corn use 6 to 7 lbs. per acre. Be sure to inoculate all Soy Beans and don't plant until danger of frost is over. See opposite side for low prices on quality seed.

They are great for Hay, Silage and Fertilizer.

ITO SAN Soy Beans grown from Condon's "Pure Bred" Seed at Breckenridge Farm. Just right for silage.

This is the best Soy Bean in cultivation for planting North of the Ohio River. Especially adapted for Northern Ill., Ind., Ohio, Wis., Iowa for silage or ripe beans.

Here You See a Field of Soy Beans in Drills for Hay or Seed
